DETAILED ACTION

The election filed on Dec.20, 2005 is not correct. Because the elected claims 1-12, 15-27 and 30-44 for the Species I still cover different species. For example, the claims 1 and 31 having limitations such as "an organic film on the pixel electrode corresponding to the data line" that is corresponding to Fig.2 wherein the organic film on the pixel electrode does not corresponding to thin film transistor, and the claims 16 and 38 having limitations such as "an organic film on the pixel electrode corresponding to the data line and the thin film transistor" that is corresponding to Fig.5, and that are different embodiments. Therefore, applicant needs to file an election according to a single species (single embodiment).

Election/Restrictions

- 1. This application contains claims directed to the following patentably distinct species of the claimed invention:
- (I) embodiment 1, Fig.2, black matrix on an inner surface of the upper substrate corresponding to the thin film transistor, and the color filter layer between the black matrix and the common electrode on the upper substrate, and an organic film on the pixel electrode corresponding to the data line;
- (II) embodiment 2, Fig.5, black matrix on an inner surface of the upper substrate corresponding to the thin film transistor, and the color filter layer on the thin film transistor (COT) having different thickness portions corresponding to the pixel portion

Application/Control Number: 10/809,327

Art Unit: 2871

and to the reflective electrode on the lower substrate, and an organic film on the pixel electrode corresponding to the data line and the thin film transistor;

(III) embodiment 3, Fig.7, no black matrix on an inner surface of the upper substrate, and the reflective electrode corresponding to one pixel region on the thin film transistor functions as a black matrix, and an overcoat layer formed between the color filter layer and the common electrode on the upper substrate; and the color filter on the upper substrate, and an organic film on the pixel electrode corresponding to the data line and the thin film transistor;

(IV) embodiment 4, Fig.8, no black matrix on an inner surface of the upper substrate, and the reflective electrode corresponding to one pixel region on the thin film transistor functions as a black matrix, and the color filter layer on the thin film transistor (COT) having different thickness portions corresponding to the pixel portion and corresponding to the reflective electrode on the lower substrate, and an organic film on the pixel electrode corresponding to the data line and the thin film transistor.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims appear to be generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Application/Control Number: 10/809,327

Art Unit: 2871

Upon the allowance of a generic claim, applicant will be entitled to consideration

of claims to additional species which are written in dependent form or otherwise include

all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

are added after the election, applicant must indicate which are readable upon the

elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mike Qi whose telephone number is (571) 272-2299. The examiner can normally be reached on M-T 8:00 am-5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Kim can be reached on (571) 272-2293. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
